BioZX² High Translucent Zirconia from Dental Direkt

Dental Direkt, one of the leading global manufacturer and suppliers of zirconia, only uses materials with the best properties to make BioZX². Biocompatibility is the ultimate priority in the selection of raw materials and only a high-purity nanoscale ZrO₂ is used. In addition, to ensure reproducible batch stability, and consistency from batch to batch, the raw materials have an extremely homogenous grain size distribution.

When it comes to pre-shaded discs, by using Multi Additive Technology[®], Dental Direkt is able to combine biocompatible, metal-free, dye additives in a balanced concentration. While conventionally dyed blanks often have a predominantly yellow coloring, Multi Additive Technology[®] colored blanks have a natural chroma extremely accurate to the VITA classical[®] color scale.

The DD Basic Shade and DD Art Elements colouring liquids allow white discs to be easily and accurately and predictably dipped or painted, with components that permit the most demanding technicians to create highly characterized restorations.

Flexural strength – 1,200 MPa • Translucency – 40%

The Briars Golf Club

127 Hedge Road, Sutton West, ON L0E 1R0

Friday, June 1st 2018 @ 1pm Tee-off

The Briars Golf Club is located just one hour from Toronto on the southern shores of Lake Simcoe. As you wind your way along historic Hedge Road, you immediately feel relaxed and understand the allure of this location. Two Canadian design legends have combined to bring you a delightful dose of golf at its best. Stanley Thompson carved out the original nine holes in 1922. Robbie Robinson integrated a second nine in 1971, creating a seamless routing that may look fairly innocuous on paper, but will be appreciated for its subtle charms. The Briars is the epitome of the old-style course.
