Rodin™ Denture Base 2.0

Denture Base Resin

Rodin™ Denture Base 2.0 is a biocompatible Class II material that is revolutionizing the creation of denture bases. With its improved flexibility, stability, and a diverse range of gingival shades, this advanced formula offers a new standard in denture fabrication, combining durability, aesthetics, and patient comfort.

Benefits & Features

High Impact Strength

Highest Fracture & Wear Resistance

Stunning Aesthetics

Outstanding Durability

Precision Chairside Production

- Print up to 8 full arches vertically & 3 full arches flat
- 49 µm XY pixel size creates smooth & fine prints reliably
- Variable layer thickness from 30 to 150 µm

Validated Workflows

- 150+ validated resin profiles available for use with slicing software and 3D printer, and curing unit
- Class I & Class II biocompatible workflows approved for a wide variety of FDA and Health Canada-certified resins

Reliable and Efficient

- 3 Build platform sizes available (Small, Medium and Large) to match your production needs
- Small build platform is ideal for fast crown, bridge, inlay and onlay prints
- Medium build platform prints fast full arch prints ideal for full arch implants, surgical guides, splints & more
- Large build platform is ideal for printing multiple cases efficiently

Continued Support & Training

- Concierge Service including remote onboarding, training & support throughout 2-year 3D printer warranty
- 2-year SOL warranty

Design night guards

exocad's *Bite Splint Module* lets you rapidly design high-quality therapeutic night guards in just a few steps.

User-friendly customization tools and intuitive workflows guide you through the design process, making bite splint production efficient and profitable.

- Adjust occlusion and remove undesirable interferences virtually
- Smooth and morph the surface of night guards individually or select the option for automatic flattening of the posterior occlusal surface
- Use a combination of both *Bite Splint Module* and *Virtual Articulator Module* for optimal results
- Design anatomic bite splints with anatomic tooth shapes and tabletops
- Produce night guards in both jaws simultaneously
- Get a new automatic bite splint design proposal using cloud-based features
- Use original tooth shape of patient for tabletops based on cloud-based tooth segmentation

* Q2 Promotions Valid from April 1st to June 31st

Offers valid from April 1st to June 31st, 2025. Available in Canada only. All discounts taken from retail prices (MSRP) only. Not valid on previous purchases, and the discounts cannot be utilized concurrently. Huge Dental reserves the right to cancel any promotion at any time. Promotion must be Redeemed by June 31, 2025.

EXPERIENCE UNMATCHED PRECISION WITH THE AIDITE EZPRINT-F1 3D PRINTER

Ultra high precision

16K ultra-high-resolution LCD printing screen, 14 X 19µm pixel size, restoring design details

Overall uniform lighting

High-power light source system combined with light intensity calibration technology, achieves 95% light uniformly to control ensuring full-size printing consistency

Efficient production

Large-size platform with high-speed printing technology to meet mass production needs

Easy to use

One-touch automatic slicing and printing, quick-release platform and resin tank, constant temperature control

EASILY MEET THE NEEDS OF IMPLANTS AND RESTORATIONS

- The crown fits accurately without looseness
- Fit adjustments for analogs in implant models
- 94% overlap rate between dental model and design file*1
- Model deformation rate <3% after 15 days*2

*1: Scanning after the dental model is printed, and comparing with the design model data
*2: Scanning after the dental model is printed, and scanning again after 15 days, compare these two data, the overlap rate value under the tolerance of 0.05mm is ≥97%

position

- Patient can continue using the present denture while enjoying better retention and physiological (natural) chewing sensation.
- Patient does not need to come to the clinic every three months to change the locator matrices.
- The handling of TiSi.snap+retention.sil is consistent with the use of soft denture liners. Thus allowing the clinician an optimal use of chairside time.
- TiSi.snap comes in different heights allowing easy maneuvering in the mouth depending on available interarch space.
- retention.sil comes in 3 different resilience hardnesses for optimal retention

PERFIT Bite Registration

Q2 Promotions Valid from April 1st to June 31st

PERFIT Bite Registration is an addition silicone, which can be used for conventional bite registration techniques in conjunction with indirect restorative procedures. It is also a scannable material that can be used for the optical recording of data when fabricating restorations with **CAD/CAM systems**.

PER007
Perfit VPS
Bite Registration
Fast Set

High final hardness

Due to the material's high final hardness of **90 Shore A** and high fracture toughness, PERFIT A Silicone for Bite Registration is easy to trim and grind. The high final hardness is particularly important for repositioning the bite registration between the models in the articulator. This is the only way to ensure perfect-fit restorations.

Fast setting time

The intraoral setting time of the fast type is 45 seconds. It provides patients with a pleasant impression recording experience, improves acceptance rate, and thus reduces the risk of inaccuracy. At the same time, it provides ample working time for full-mouth bite recording.

Scannable

PERFIT Bite Registration is a scannable bite registration material that is suitable for both universal bite registration and powder-free optical data recording of the antagonists for CAD/CAM technology, e.g. for fabrication of all-ceramic restorations.

Whipped-cream-like consistency

The consistency similar to fresh cream makes it easy for patients to bite. It is not easy to flow and has a certain bite resistance, which brings a good clinical experience to patients.
