Shining 3D AccuFab-F1 3D Printer

Designed for stability and speed, the AccuFab-F1 3D printer features dual heating modules for both the print platform and resin tank, ensuring optimal material performance. With a maximum light intensity of 18 mW/cm², it excels in printing high-ceramic filler resins and high-viscosity materials with outstanding accuracy. Its modular design simplifies maintenance, while the quick-release resin tank film streamlines workflow efficiency for both clinics and labs.

AIDITE EZ PRINT MODEL RESIN

As a high-quality material, Aidite dental model resin is extremely reliable and easy to work with. Due to high hardness, 3D printing model can resist external scratches.

- High dimensional stability
- Scratch resistance
- Low viscosity
- Excellent surface detail
- Almond/yellow colour
- Great value

Keyprint KeyDenture Base

Designed for fast-printing and efficient workflows, KeyDenture Base ensures long-lasting performance and reliability for your patients.

- High-impact durability: flexible without being brittle
- Realistic, life-like recreation of natural gingival tissue
- Low viscosity allows labs to print faster
- Comfortable for the patient
- Compatible with digital laboratory workflows/ popular tooth materials

dx denture flex

The revolution for printed partial dentures

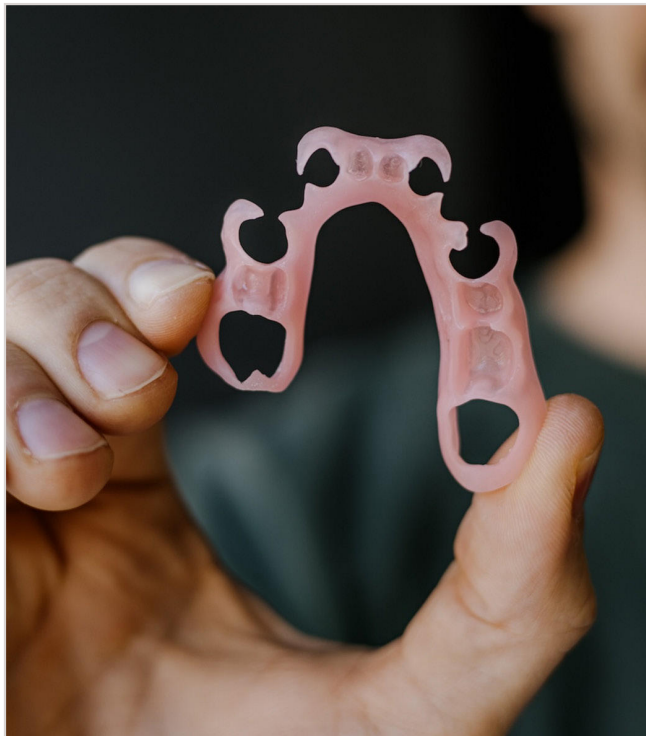

MDR certified, light-curing, biocompatible resin for the 3D printing of removable denture bases. Experience a new level of comfort with dx denture flex. No metal clasps, precise 3D printing, and a thin material structure ensure a perfect fit and a natural look.

Save time by eliminating milling and injection molding, while benefiting from sustainable material use and unbeatable costs – all without compromising on quality.

- Available in two shades to blend seamlessly with the natural gum color.
- Fast production time: Resulting in high cost efficiency
- High wearing comfort: due to flexible material properties
- Natural appearance: Two colour options, no metal framework necessary

Bredent primers are based on a long research history - making them the material of choice for dental professionals.

We have a range of bredent primers for the process of bonding various dental materials used in the oral environment...

Bredent primers

With a range of primers it is important to ensure that each primer is optimized for use with the framework it is being applied to. All bredent primers have undergone rigorous testing procedures and ensure superior performance and longevity.

bredent primers include:

- visio.link for the adhesive bonding of composite to plastics
- K-Primer for the adhesive bonding of composite to oxide ceramic frameworks
- MKZ Primer for the adhesive bond of composite to metal frameworks
- MKZ EM-Aktivator for the adhesive bond of composite to precious metal framework

Bredent adhesives

- DTK- Adhesive for bonding zirconia to titanium
- combo.lign luting composite
- combo.lign opaquer light-curing composite

Special Price - \$995.⁰⁰

Crea.Lign composite set for quick and easy red-white customization of plastic prosthesis and bridges (zirconium/ metal/ high-performance polymer frameworks).

Use the Crea.Lign GUM materials in the visio.lign system to individualize your dentures to achieve high-end aesthetics. Offer your customers this individualization service and increase the profitability of your laboratory.

PERFIT Bite Registration

Q2 Promotions Valid from April 1st to June 31st

SCANNABLE

works with CAD/CAM
technology without
powder!

PERFIT Bite Registration is an addition silicone, which can be used for conventional bite registration techniques in conjunction with indirect restorative procedures. It is also a scannable material that can be used for the optical recording of data when fabricating restorations with **CAD/CAM systems**.

4+1

PER007
Perfit VPS
Bite Registration
Fast Set
\$49.⁹⁵

High final hardness

Due to the material's high final hardness of **90 Shore A** and high fracture toughness, PERFIT A Silicone for Bite Registration is easy to trim and grind. The high final hardness is particularly important for repositioning the bite registration between the models in the articulator. This is the only way to ensure perfect-fit restorations.

Fast setting time

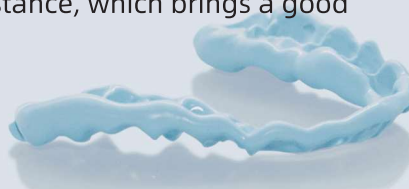

The intraoral setting time of the fast type is 45 seconds. It provides patients with a pleasant impression recording experience, improves acceptance rate, and thus reduces the risk of inaccuracy. At the same time, it provides ample working time for full-mouth bite recording.

Scannable

PERFIT Bite Registration is a scannable bite registration material that is suitable for both universal bite registration and powder-free optical data recording of the antagonists for CAD/CAM technology, e.g. for fabrication of all-ceramic restorations.

Whipped-cream-like consistency

The consistency similar to fresh cream makes it easy for patients to bite. It is not easy to flow and has a certain bite resistance, which brings a good clinical experience to patients.
